

Special Permissions and ACL Task

Configure a file `/var/tmp/fstab` permissions

Description: Copy the file `/etc/fstab` to `/var/tmp/fstab`. Permissions for the configuration file `/var/tmp/fstab`

- User woody can read and write access to `/var/tmp/fstab`
- User buzz can not read, write, or execute access to `/var/tmp/fstab`

Create a shared directory

Description: Creates a shared directory `/home/admins` with the following characteristics:

- The group ownership of the `/home/admins` directory is `adminuser`
- Members of the `adminuser` group have read, write, and execute permissions on the directory.
- All other users do not have any privileges (root users can access all the files and directories on the system)
- The files that are created in the `/home/admins` directory have their group ownership automatically set to belong to the `adminuser` group
